## Core Processing

Wings is a comprehensive core processing system built to be more efficient and cost effective for your financial institution. Its independent platform and open-system design enable your financial institution to adapt quickly to industry changes and scale operations. Wings give you the freedom to choose the hardware and software solutions that give your institution a competitive advantage in this ever-changing technology landscape. Our flexible core system offers remarkable control in terms of deployment options, operating environments, and processing methods.

Wings help your financial institution make data-driven decisions by providing a unified view of account holder information through synchronizing fragmented systems. VSoft starts the Wings implementation process by allowing your financial institution to select the delivery model of your choice, based on your size, required features and budget. This will result in an optimization of your resources, so you never lose sight of your main goals. Your institution can adapt either real-time or batch posting, or a combination of these transaction processing methods in any chosen operating environment. With customizable business rules, you gain remarkable business agility to quickly launch new products or fine tune your existing products.

#### **SERVICE ORIENTED ARCHITECTURE**

The platform independent and open-system design leverages your existing technology infrastructure, lowering development and maintenance costs.

#### **DATABASE & HARDWARE AGNOSTIC**

Wings is compatible with a wide range of hardware, operating systems, and databases. VSoft is committed to certifying technology to maintain your freedom of choice.

#### **COMPREHENSIVE WORKFLOW**

Our user interface ensures more effective operations due to process workflow efficiencies.

#### **FLEXIBLE PARAMETERS**

Configure new products and roll out quickly within a matter of minutes with Wings' flexible parameters. New screens, sections, and fields can be added in real-time natively in the system without having to depend on costly programming and customizations.

#### **COMPLETE REPORTING**

Customize reports easily and export in a variety of formats, such as PDF, Word, and Excel. Automate monthly reporting with scheduled report generation.

#### **HIGHLY ACCESSIBLE**

Wings is web-based, meaning it can be accessed using a smartphone, tablet, or computer. Staff members benefit from the option to complete tasks on more interactive and flexible devices.

#### **CUSTOMIZABLE PRODUCT FIELDS**

Set up additional product specific fields and define the data type, valid values, default values, and multiplicity of the field. The flexible interface allows you to attribute the field to any screen, allowing you to customize the platform to fit your operations.

#### **INTERFACES/INTEGRATIONS**

Wings enable institutions to keep up with the speed of innovation by integrating into various industry solutions. Wings' architecture is designed to add new products and services quickly without disrupting the user experience.
